Cover Letter: Forward Deployed Engineer - Software Engineer - Singapore

ElevenLabs Singapore 2026-08-10

I am applying for Forward Deployed Engineer — Software Engineer (Singapore) at ElevenLabs. Your Audio AI frontier — human-like speech at scale, deployed across media, education and enterprise agents — is where full-stack execution and customer obsession compound. I want to own end-to-end integrations with your strategic customers in Singapore and across the region.

I am an NUS Information Systems graduate and Ngee Ann Polytechnic IT (N54) — CSIT Diploma Scholar and Director's List — building across Web Design and Development, Database Development, Custom Software and Application Development, Software Testing and Mobile Application Development. I authored a whitepaper on internal and shadow APIs (API design, integration, governance) at https://lnkd.in/gsCZca4B. I work Mandarin and English and am based in Singapore, available for frequent on-site customer work.

- **Authored internal and shadow API strategy,** published whitepaper mapping discovery and governance for API-driven integrations — the integration surface this role owns
- **Built across web, mobile and database layers,** delivers custom software from prototype to production with testing rigor and mobile delivery
- **Recognised for technical breadth under CSIT scholarship,** selected as CSIT Diploma Scholar and Director's List Sem 1.2 for Information Systems work
- **Bilingual delivery in Singapore,** bridges Mandarin and English stakeholders for enterprise adoption in the region

Enterprises want Audio AI in production quickly, but integration, reliability and governance slow them down. I will embed with your customers, shape architecture with their engineers and executives, ship a lean integration that proves value, then harden it via API design, testing and iteration — AI-first, high-velocity, excellence in the details.

Based in Singapore and available for regional travel at short notice. I have attached a tailored CV mirroring your integration and architecture vocabulary without inventing stack I do not own.
