Cover Letter: Software Engineer, Agent

Sierra Singapore 2026-08-10

I am applying for Software Engineer, Agent at Sierra. Your agent platform — production-grade AI agents for finance, healthcare and commerce, trusted by large enterprises — is where ADLC ownership from pilot to iteration matters. I want to build reliable agents that drive revenue directly in your growing Singapore office.

I am an NUS Information Systems graduate and Ngee Ann Polytechnic IT (N54) — CSIT Diploma Scholar and Director's List — across Web and Mobile Application Development, Database Development, Custom Software and Software Testing. I authored a whitepaper on internal and shadow APIs (integration, reliability, eval-adjacent patterns) at https://lnkd.in/gsCZca4B. I am a builder with high agency, comfortable working directly with customers on ambiguous problems.

- **Mapped internal and shadow API governance,** whitepaper on discovery and integration patterns that inform agent tooling, RAG pipelines and prompt engineering for production agents
- **Shipped across the stack with testing rigor,** web, mobile and database-backed custom software from prototype to production with reliability as a feature
- **Earned CSIT Diploma Scholarship for technical breadth,** selected for Information Systems excellence at Ngee Ann Polytechnic
- **Work direct with stakeholders,** bilingual Mandarin and English delivery for enterprise customers in Asia

Enterprises need agents that outperform humans on real tasks like churn, device troubleshooting and personalization — and stay reliable in production. I will own the agent life cycle with Sierra customers, tune and iterate in production, and feed platform gaps back to research and product to shape the future of agent development.

Singapore based and available for on-site enterprise work at short notice. Tailored CV attached, aligned to Sierra values of trust, customer obsession, craftsmanship and intensity.
