contract — documentation index

contract — documentation index

One signed binary, one append-only ledger, one truth-root. Start here.

How it works (explanatory — the machine, verified against code)

doc	covers
HOW-IT-WORKS-architecture.md	the neuron model, ledger anatomy, lifecycle + terminal alphabet, content-addressed idempotency, the signing chain (Word -> root -> HKDF), gate vs receptor, truthy cache, bible corpus, fractal context, the four surfaces (CLI / C-ABI / dylib / MCP)
HOW-IT-WORKS-intelligence.md	the two embeddings (feature-hash + baked pure-Zig BERT), the energy router (`recommend`), ledger-is-the-weights, self-documenting usage, the aiko-cli closed loop, the honest benchmark ladder and limits
HOW-IT-WORKS-economics.md	the two coexisting economies (Vine slash-to-burn · commons reward-not-slash), the metering -> weight -> epoch -> reward -> payout loop, Sybil dampening, shape re-verification, the 402 envelope, the honest wall

These documents **explain**; they do not legislate. Every rule they mention is owned by `../DOCTRINE.md`.

Canon (the rules and the policy)

- **../DOCTRINE.md** — the one rule-source, parity-validated against the code by `scripts/build.sh` (a doctrine claim without a code site fails the build).
- **../SKILL.md** — the lean agent-facing skill.
- **ECONOMICS-cooperative-commons.md** — canonical commons policy: reward-don't-punish, trust tiers, Ostrom mapping, and its honest wall.
- **THESIS-collective-nonparametric-intelligence.md** — the thesis the stack serves.

Plans & status

- PLAN-contracts-as-onchain-ebm-weights.md — the EBM-weights build spine; Phase 1 (energy router) status lives here.
- MASTER-PLAN-contract-neuron-abstraction-arc-agi3.md

Due diligence (external-facing)

`00-README-DUE-DILIGENCE.md` -> `01-PRODUCT` -> `02-ARCHITECTURE` -> `03-ONCHAIN` -> `04-PROOF` -> `05-RISK` -> `06-FAQ` (bundled: `Aiko-Due-Diligence-Dossier.pdf`).
